SCHOLAR REHBAR

Entrepreneurship Project

4th Evening-A
BS Software Engineering
GC University, Fsd

ScholarRehbar is a SaaS-based scholarship guidance platform designed to help students discover official scholarship opportunities and avoid consultancy scams. The platform provides trusted guidance, transparent processes, and direct support to help students independently pursue higher education opportunities abroad, especially in Germany and France. Its mission is to simplify the scholarship journey through reliable information, affordability, and future AI-powered assistance.

1. Introduction

ScholarRehbar is a software-as-a-service (SaaS) platform which aims at helping Pakistani students looking forward to furthering their studies in Germany and France through proper guidance and information about the scholarships available. It can be termed as a reliable and trustworthy digital platform where Pakistani students can benefit by learning more about various scholarships, their prerequisites, preparation for documentation, and the complete process of studying abroad without needing to consult any costly or even fraudulent consultancy firms.

The concept of ScholarRehbar was inspired by the firsthand experience of the founders in observing an extremely prevalent issue within the Pakistani students' community. During the course of their studies and interaction with other students at universities, the founders noticed firsthand that thousands of Pakistani students fall prey to fraudulent consultancy companies, which charge them between fifty thousand and three hundred thousand Pakistani Rupees for guaranteeing admissions and scholarships, which do not end up taking place. Many students have been observed losing their savings, missing out on deadlines, and giving their academic future in the hands of consultants who lacked any verifiable information about their claims as well as having no affiliation with any university or scholarship authorities in foreign countries. However, it is also observed that everything involved in studying abroad, including discovering opportunities and securing a visa, is perfectly capable of being done independently if the student possesses enough information, proper guidance, and resources. It is the above observation, in particular, that forms the basis of inspiration for ScholarRehbar.

In today’s world, international education has emerged as one of the most influential ways for development both personally and professionally. Countries like Germany and France have set up fully and partially funded scholarships aimed exclusively to attract talented students from underdeveloped countries like Pakistan. Various schemes like DAAD scholarships from Germany and Campus France from France provide legitimate means for capable students to

earn their degrees from prestigious universities without paying anything much or very little. But the important thing here is to raise the level of awareness among Pakistani students regarding these legitimate programs. Most of the students in Pakistan either lack information about these scholarships or are misguided by some fraudulent agencies who claim that there is no way to get admitted into foreign universities without payment. ScholarRehbar has come up to fulfill this vital need for Pakistani students in particular.

ScholarRehbar comes with many advantages. Firstly, there is a guide for applying for scholarships which takes the student from eligibility check, to picking universities, preparing documentation, crafting the statement of purpose, to obtaining visas. There is no need for middlemen, expensive consultancy fees are not needed, and the students are protected from frauds and scams. The whole process has been simplified in such a way that it puts the students in charge, offering them the quality of service which the consultancy companies promise, but do not necessarily provide.

2. Problem Statement

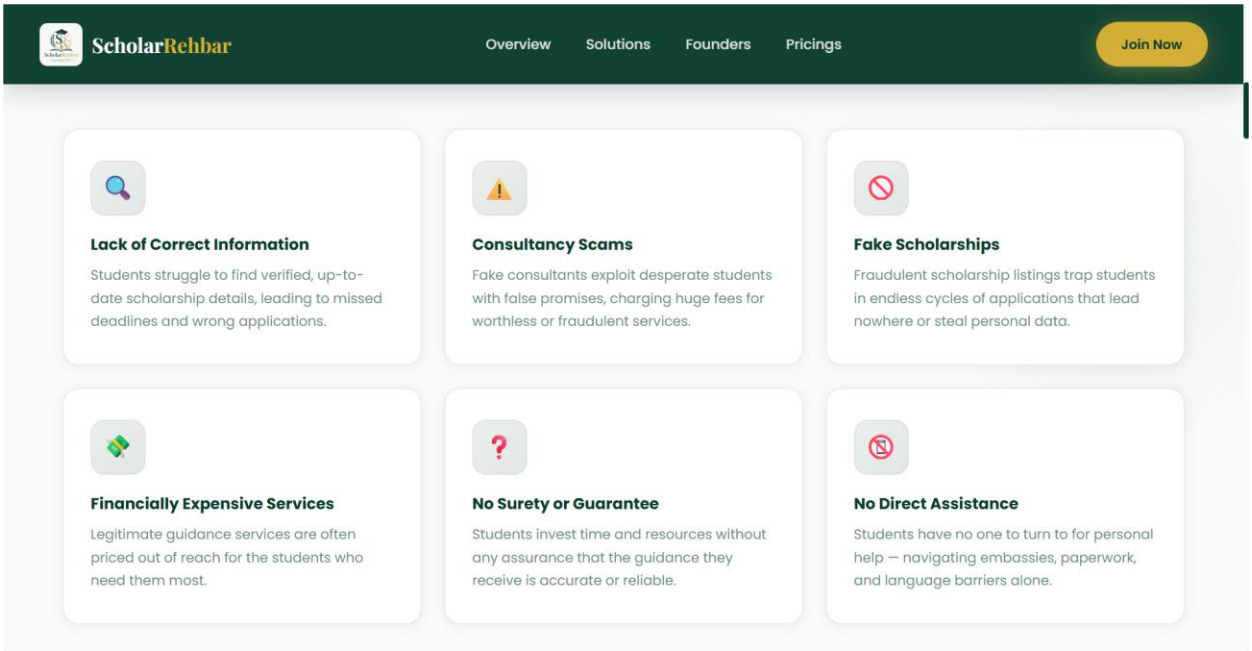

Pakistan boasts of having one of the largest numbers of young people in the world, and thousands of students graduate from the intermediate level to higher education levels on a yearly basis. However, the increasing number of students who wish to study outside their home country continues to increase with many opting to join universities in Europe like Germany and France that provide quality education through recognized programs and scholarships for international students. With all the opportunities available, the reality of many Pakistani students is that they are not able to benefit much from these programs because of misinformation, unorganized counseling, and exploitative consultancy services.

The foremost and most extensive issue among Pakistani students pertains to the existence of numerous fake and fraudulent consultancy agencies throughout Pakistan. Such agencies claim to be legitimate agents of foreign universities as well as scholarship institutions and extort fees ranging between fifty thousand to hundreds of thousands of Pakistani Rupees in order to provide admissions, scholarships, and help process visas to the students. In most cases, these agencies lack any form of affiliation or even proper knowledge of the criteria set forth for securing scholarships, along with lacking accountability for providing promised results. Many of those students who have paid up fees have been left disappointed due to being presented false documents and being rejected on account of missing deadlines and visa applications. Moreover, in most cases, these students end up losing all the money they have paid to the agencies.

A second major issue relates to the absence of credible, centralized, and verified sources of scholarship information that Pakistani students can access within their native language and cultural environment. While official scholarship schemes such as DAAD Scholarships offered by the German government, Eiffel Excellence Scholarships offered by the French government, and the Campus France programs have extensive sources of information

regarding the scholarships available, there is no centralized source where all such information can be gathered and presented to the students in one single place. These sources contain complicated information written using very technical academic language which makes it very challenging for a novice applicant.

The expense of availing oneself of such consultancy services is in itself a significant hurdle. Students coming from average and poor families, unable to pay for consultation services, are effectively deprived of any sort of help, as they are denied access to scholarships intended for deserving students irrespective of their economic standing. The lack of a reliable, low-cost option for consultation has enabled scams by fraudulent consultancies to flourish in the vacuum created due to the inability of digital platforms to fill it. The presence of incorrect information, money-grubbing, lack of organization in sources, and the total lack of a self-guidance program form an issue needing an urgent solution, ScholarRehbar aims to provide.

3. Proposed Solution

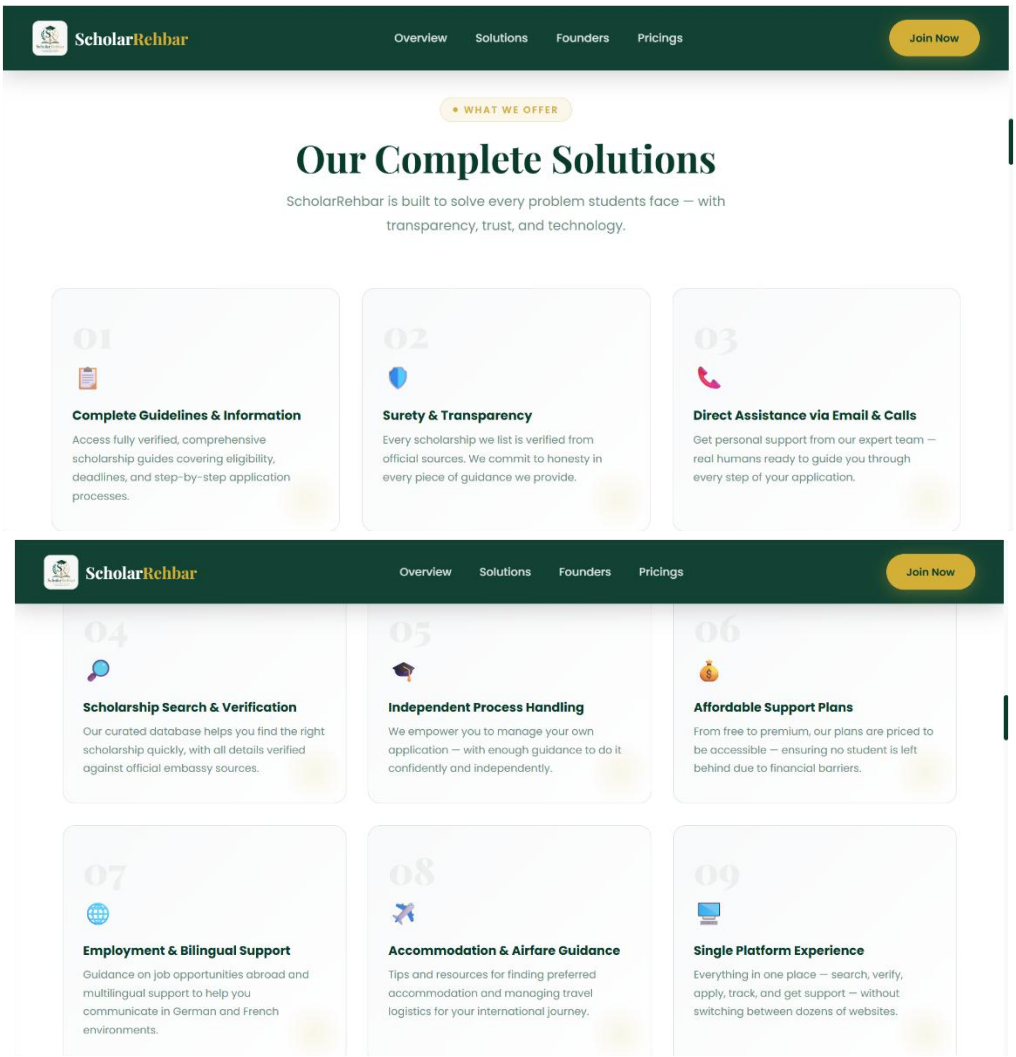

The ScholarRehbar is a SaaS-based platform offering scholarships and study abroad guidance that has directly tackled all the problems discussed above. It is worth mentioning that, unlike other services, ScholarRehbar does not seek to take the place of the applicant but rather encourages them to become fully responsible for the entire experience by availing relevant information, clear guidance, and even direct help from a single user-friendly portal. As far as the mission of ScholarRehbar is concerned, it can be summed up in one statement: every Pakistani student who deserves an international scholarship must get one without having to pay a fortune in consultancy charges.

The system operates through a systematic, step-by-step approach that takes students through their journey right from the first moment of their entry into the system until they reach the latter stages of the whole process. Once the student enters the ScholarRehbar system, he or she gets introduced to verified scholarships that can be pursued in Germany and France while being a Pakistani citizen. Information about the scholarships is made accessible to the student in a comprehensive manner which includes details such as eligibility criteria, required documentation, application dates, funding and more. Students are taken through the rest of the process in phases including selecting universities according to their profiles, preparing all the relevant documentation, writing statements of purpose and finally making visa applications.

ScholarRehbar's main characteristics include scholarships search and validation. This guarantees that all scholarship programs on the website have been officially verified and updated to avoid any issues regarding fake or outdated scholarship programs. ScholarRehbar also provides comprehensive guidelines regarding the requirements for each scholarship. The guidelines make it easier for students to understand what they have to do. There is a document preparation guide that will help you learn about the type of documents you should prepare, how you should organize your documents, and when you need to provide them. Users with subscriptions will be offered direct

assistance through emails and phone calls. ScholarRehbar can also help with accommodations and ticket booking in case the user gets an admission.

There are many advantages offered by ScholarRehbar which are both immediate and significant. The money saved by students is in the form of not having to pay consulting fees amounting to tens of thousands of rupees. Confidence and self-reliance are achieved since students have the insight about the whole procedure on their own, and not merely by taking agents' directions at face value. Scamming is avoided with the help of the platform's authenticated information system and risk warning system that detects common scam methods. Above all, students using ScholarRehbar learn the true process of studying abroad – information that will benefit them throughout their international education careers.

4. Market Analysis

Industry Overview

The global education consultancy and study abroad services market stands at above 33.8 billion US dollars in 2026 and is growing rapidly owing to increasing demand from developing nations, wherein the pursuit of international education has become an essential requirement for securing better careers and improved lifestyles. Pakistan stands out as one of the major players contributing to this trend worldwide. With three million students enrolled in educational institutions in Pakistan, as well as nearly two million on-campus university enrollment, as per statistics provided by the Higher Education Commission and the Higher Education Data Repository 2025–26, Pakistan stands among the few countries having one of the largest and fastest-growing populations of potential international students worldwide. This is because of the young demographic comprising mainly people under the age of twenty-five years, coupled with increasing demands from the middle classes and quality issues in domestic higher education.

Currently, the Pakistani study abroad consultancy industry is facing a time when its growth will happen only through forced transformation. In the old market scenario, it has been seen that the industry is dominated by the physical offices of consultants based on the commission structure, where they charge between fifty thousand and five hundred thousand Pakistani Rupees from students who can complete their tasks without any hassle. Unfortunately, an increasing distrust towards the industry has arisen, where experts have claimed that up to eighty percent of students are afraid of being cheated by consultancy agents. This distrust, along with the overall transition of students' activities to the digital world, presents a great opportunity for disruption by platforms like ScholarRehbar.

Demand Analysis

The need for credible guidance on affordable study abroad options for Pakistani students is both great and institutionalized. As per statistics provided by the

Bureau of Emigration and Overseas Employment and Ministry of Finance, the estimated number of young Pakistanis who migrated abroad was about 762,499 in 2025, and 725,672 in 2026. From the year 2022 to 2025, the number of Pakistani migrants reached around 2.9 million, which indicates the extent of migration due to economic issues. International students comprise a significant part of the overall migration pattern. About 103,000 Pakistani students look forward to studying abroad every year, and their numbers are expected to increase in the coming years as European countries become attractive options compared to costly English-speaking nations.

Germany has become an especially attractive country for Pakistani students. There are more than 9,800 Pakistani students studying in Germany's universities, where they have been experiencing an annual growth rate of about twelve percent, due mainly to Germany’s free education at state universities, their work visa for Pakistani graduates after completing studies for up to eighteen months, and the existence of scholarships like DAAD, with 605 scholarship holders from Pakistan receiving it in 2023 alone. Pakistan also ranks among the top destinations for the Erasmus Mundus scholarship worldwide, getting 114 scholarships in one cycle alone.

Yet in spite of such requirements, for the majority of students, the practicality of financials poses a tough challenge. About ninety percent of Pakistani students pursuing overseas education fund their education by themselves, and from 100,000 students who apply for scholarships each year, only about 2,500 to 3,500 get fully sponsored. The disparity between scholarship requirement and success is not because of students' incompetence, but due to improper preparation, miscommunication, lack of information, and absence of any form of guide – issues that ScholarRehbar addresses directly.

Competitor Analysis

ScholarRehbar stands out as an entity that is working in the niche between two other already existing but insufficiently relevant alternatives. The first group includes traditional consultancy firms like IDP, ABN Overseas, Edify Group, among others, who provide personal consultations, yet at exorbitant prices,

and with a clear conflict of interest in their intentions to steer their clients toward partner universities. On the other hand, there are online free sources like Facebook groups, Reddit forums, and the websites of DAAD, Campus France, and HEC institutions. The problem with these sources is the overwhelming amount of available information, which makes it impossible to use effectively on one's own. Additionally, some of the globally accessible digital platforms, such as Leverage Edu and Yocket, focus solely on Indian students and lack the knowledge of relevant processes required in Pakistan, which include IBCC, HEC, and MOFA attestation procedures. ScholarRehbar addresses all these gaps by providing relevant scholarship information, step-by-step guidance, and personal assistance at affordable rates.

Market Trends

There are several trends that affirm the perfect timing for ScholarRehbar to launch into the market. There is an increase in the demand for personalized online, self-service apps using mobile-first technology, along with an increase in the demand for artificial intelligence-based support in the education technology segment. Germany and France are emerging as cheaper alternatives to the UK, Canada, and Australia because of stringent visa policies being adopted by the latter. Fraud prevention and awareness amongst the Pakistani student community and their families have created the need for platforms that are officially endorsed and verified. Subscription business models are very effective for providing value to users on a continuous basis, while the price range of ScholarRehbar of one thousand to fifteen hundred Pakistani Rupees is very affordable in comparison to its competitors.

5. Target Market

Customer Segmentation

ScholarRehbar's target market is made up of students from Pakistan ranging in age from eighteen to twenty-seven years old who have intentions of continuing their higher education in either Germany or France. However, it should be noted that such a target market is not homogeneous and could be easily split into three separate segments, each having its own particularities.

The first is called the STEM Aspirant, whose age group lies between nineteen and twenty-three years, and who is most likely a fourth-year student pursuing either a Bachelor's in Computer Science, Software Engineering, or an electrical engineering degree from universities like NUST, FAST, UET, or Government College University Faisalabad. The user is tech-savvy, has profiles both on GitHub and LinkedIn, and is drawn towards Germany's free tuition policy for public universities and its reputation for providing quality education in engineering and technology fields. In terms of income, the student falls into the middle-class category and is highly dependent on getting scholarship money through the blocked account requirement to make the trip feasible for him/her. The most promising demographic for ScholarRehbar is undoubtedly this one since around sixty percent of Pakistani students studying in Germany are engineering, IT, and data science majors.

The second group is the Career Shifter, aged twenty-four to twenty-seven, who have one to three years of experience in the workplace working in the domain of IT or telecoms. This group member is disappointed with the lack of career growth and the cap on salaries provided by the job market in Pakistan and sees a Master's degree from Germany or France as a way forward into the job market there. The group belongs to the upper middle-income category and would be willing to use their personal funds or small personal loans to finance their applications. They are goal oriented and time conscious and need an application process that respects their knowledge while addressing its deficiencies.

The third category is that of the Scholar-Hunter, whose age range is between twenty years to twenty-five years old, marked by a very good overall GPA which should be 3.7 or higher, participation in extra-curricular activities like Model United Nations and community service, and having the clear intention of acquiring completely funded scholarships like DAAD scholarship in Germany and Eiffel Excellence Scholarship in France. This type of student is very much inclined to conducting researches but is often deprived of factual and updated information regarding the deadlines, qualifications, and required documents to acquire scholarships because of the lack of proper sources where to look for.

Customer needs and behavior

Regardless of the segments considered, there are a number of common characteristics that define the way ScholarRehbar needs to market its product. Pakistani students in 2026 have an apparent tendency towards skepticism about traditional consultancy agencies. With personal experience of consultants who take payments for opening files but never produce anything tangible, the modern-day Pakistani student looks for channels that provide immediate transparency and validated information at all stages of the process.

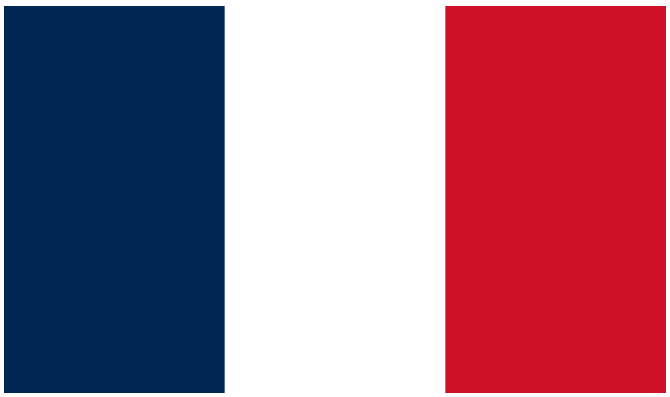

Where the digital behaviour is concerned, this audience is mainly active on TikTok, YouTube, and Instagram for doing their primary research and learning from the vlogs produced by students who are currently studying abroad. However, where the actual execution of the application process is concerned, the users need to opt for reliable platforms that provide some tools for application processes. Moreover, they have no issues paying their subscription fees digitally via platforms like JazzCash, Easypaisa, SadaPay, and NayaPay and prefer to pay a monthly fee rather than a huge amount all at once. Hence, the subscription fee of ScholarRehbar ranging between one thousand to fifteen hundred PKR per month will be a perfect choice for them.

One crucial behavior-related insight for 2026 pertains to AI-phobia related to the creation of statements of purpose. With German and French universities becoming more adept at catching out-of-the-box statements created by AI, students are hesitant to use AI tools for writing their SOPs. This is precisely

where ScholarRehbar differs from its competitors in using AI for guidance instead of AI-based generation of application essays. ScholarRehbar uses an interview-style feature in which it interviews students on their academic profile, projects, and goals before generating a customized framework. Students are required to fill in this draft themselves.

ScholarRehbar's demand is highest among large urban cities such as Lahore, Karachi, Islamabad, and Faisalabad where there is higher availability of universities and internet connectivity; however, the digital nature of ScholarRehbar enables it to be just as available to second-city students who lack any other choice besides costly local consultancy firms.

6. Product / Service Design

Design overview

ScholarRehbar is created as a contemporary SaaS web platform that utilizes mobile-first web design concepts to create a sleek and professional-looking site that conveys all the values that it embodies. The visual style of ScholarRehbar includes a color scheme made up of dark emerald green, symbolizing growth and Pakistan's culture, as well as white and gold tones that indicate high-quality services. The general design concept of ScholarRehbar is based on minimalism and an easy-to-use student-oriented website similar to sophisticated finance technologies websites. ScholarRehbar will be fully responsive on desktop, laptop, tablet, and smartphone screens, with extra consideration paid to mobile devices, since the majority of Pakistani students use their smartphones to interact with digital products.

Working Mechanism

ScholarRehbar consists of three key functional modules, working in tandem to deliver an integrated solution for students wishing to pursue studies abroad. The first module comprises the Document Vault and APS Readiness Module. It acts as the main vault for all of the student's documents. Once he registers, he is shown a dynamic APS Readiness Meter, personalized according to the latest requirements of the German Embassy. It shows which of the documents, from the list of HEC attestations, IBCC certificates, MOFA stamps, and transcript of records, have been completed, which need to be, and which are outstanding. This module addresses a problem faced by many Pakistani students who fail their applications due to improper completion and attestation of their documents.

Module Two: Scholarship Discovery Engine

The second core module offered by Scholarly Pursuit includes the Scholarship Discovery Engine, which presents students with an always-updated and verified list of official scholarships available in Germany and France. In relation to scholarships in Germany, the system compares the individual CGPA and

proficiency tests with the eligibility criteria for scholarships offered by particular universities and the DAAD Scholarship. Regarding the French scholarships, the module will be updated according to the deadline dates of the Eiffel Excellence Scholarship, the Charpak Scholarship, and the applications on the Campus France Etudes en France portal. All scholarships on the system have been obtained through official sources and verified.

The third module is the AI SOP Co-Pilot, which has a unique approach towards tackling the statement of purpose writing problem. Instead of producing a whole essay that could be rejected by the university's admission committee for being detected to have been written by an AI, the AI SOP Co-Pilot employs a unique question and answer technique where it poses the student ten questions on his/her academic and professional history, interests, and goals, and generates a framework for a personalized statement of purpose.

Technology and Material

The website is constructed using the technologies of HTML5, CSS3, and JavaScript for its frontend to ensure quick loading times as well as maximum compatibility with all devices and web browsers due to Pakistan's diverse internet connectivity conditions. Its backend is scalable for an increasing number of users, but there are additional planned improvements like React.js implementation, Firebase authentication, as well as the creation of an AI agent using language models.

7. Unique Selling Proposition (USP)

The ScholarRehbar brand enjoys a unique competitive advantage in the Pakistani market for study abroad services that no other service, consultancy, or free platform can match. ScholarRehbar's competitive advantage is based on five separate but complementary foundations, which collectively form a value proposition that is superior to any other in terms of credibility, cost-effectiveness, organization, and student orientation.

The foremost benefit that can be identified is the unwavering dedication of ScholarRehbar to the delivery of reliable and authentic data. In contrast to the commission-based consultancy firms that tend to give out misleading advice, the deadlines and processes of ScholarRehbar are all based on the official portals of universities, embassies, and scholarships.

Pillar number two is that of radical affordability. As conventional consultants demand fees ranging from fifty thousand to five hundred thousand Pakistani rupees when students themselves could have performed these tasks on their own, ScholarRehbar offers expert advice for just one thousand to fifteen hundred rupees per month, making high-quality consultation affordable for all students without discrimination.

The third benefit of this platform comes from its ability to empower the student to build their knowledge and capacity, rather than making them dependent on the agent. The fourth benefit is the ability of this platform to offer a balance between the speed and convenience of self-service alongside personal assistance via email and phone service. The last benefit of ScholarRehbar is that it has been developed by software engineering students at GCUF, who not only have the skills necessary to create an outstanding platform but also know all the issues of their target audience.

8. Business Model

The company ScholarRehbar adopts a freemium subscription model that is geared towards maximizing the availability of its services to all students regardless of their economic status by creating sustained and scalable revenues from its premium services. This model is based on three distinct subscription models that directly match the support requirements of different types of students.

Revenue Streams

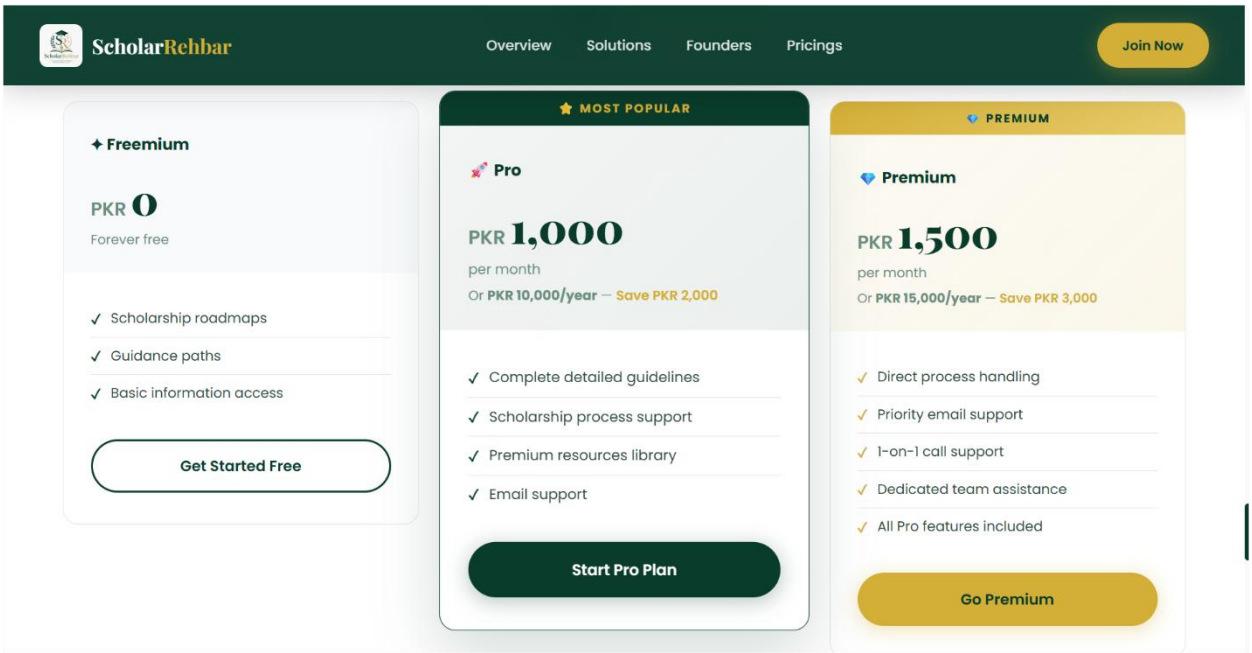

The first one is known as the Freemium package that will be free of charge for all registered users. In such a way, all registered users will have access to general scholarship guides, general paths to help students get a general idea regarding studying in Germany and France. It will act as the initial step towards conversion.

Plan two is known as the Pro Plan, which costs one thousand Pakistani Rupees on a monthly basis or ten thousand Pakistani Rupees on an annual subscription basis, allowing its customers to save two thousand rupees as opposed to the monthly plan. It includes complete structured scholarship guides, unlimited access to Document Vault and APS Readiness Module, the Scholarship Discovery Engine, premium materials, and even the AI SOP Co-Pilot functionality. This plan caters primarily to the STEM Aspirant and Scholar-Hunter segments.

Plan 3 is the Premium Plan, which costs one thousand five hundred Pakistan Rupees monthly or fifteen thousand Pakistan Rupees yearly, with a discount of three thousand Pakistan Rupees on an annual basis. Alongside the benefits that come with the Pro Plan, premium subscribers enjoy the additional privilege of getting help with their processes, including email assistance, phone calls, and personal assistance from the Scholar Rehbar experts. The Premium plan is intended for career shifters who need human intervention in certain steps of the process.

Cost Structure

The main expenses for ScholarRehbar are platform development and maintenance, information research and validation, cloud infrastructure hosting costs, customer service for Premium subscription holders, and marketing efforts. ScholarRehbar functions according to the principle that the value of cost depends on the value of information provided, since information accuracy is the core of the whole value proposition offered by ScholarRehbar. The very low marginal cost of providing an additional subscriber with services via the digital platform guarantees high profitability.

9. Marketing Strategy

Promotion Method

The marketing strategy for ScholarRehbar involves targeting the students in their natural habitats, gaining credibility from trustworthy content, and registering them on the platform through an organized multichannel approach. Since the primary audience comprises of young students between the ages of eighteen and twenty-seven who are very active in their digital world, there will be a focus on digital marketing rather than the traditional form, using the strengths of communities and peer influence that exist among the youth in Pakistan.

The core of the promotion campaign of ScholarRehbar lies in its content marketing strategy aimed at adding real value. ScholarRehbar will offer valuable content about applying for the DAAD scholarship step-by-step, preparing APS documentation properly, crafting an effective statement of purpose, and how to avoid consulting scams. This way, it is possible to fill the gaps that Pakistani students have regarding their concerns and provide answers to questions that have not been answered before. As a result, the reputation of ScholarRehbar as an authoritative source on study abroad consulting issues will be reinforced. Social proof based on testimonials of satisfied students and their success stories will be crucial to establishing the credibility of the platform in the market.

Social Media Strategy

ScholarRehbar will be present in an active and strategic manner on TikTok, Instagram, YouTube, and LinkedIn. Short videos will be posted on TikTok and Instagram Reels with content on the deadline for scholarships, guidance on how to prepare documents, processes related to getting visas, and busting myths regarding consultancy scams, which will be useful during the discovery phase of the student journey. Longer videos in the form of tutorials and step-by-step processes will be posted on YouTube for those students who have decided to move forward with their application process. ScholarRehbar's

credibility can be established through the use of LinkedIn with academic experts, university students, and institutions.

Distribution Channels

The ScholarRehbar will be mainly distributed through the use of its platform on the website from where anyone can access it via any device and any browser. The partnerships with the university campuses will play an important role in offline distribution. Information seminars and sessions will be arranged by the founding members of the company at universities such as GCUF, NUST, FAST, and UET to let the students know about the product when they are in their last years of college and start thinking about studying abroad. In addition to that, referral campaigns will be arranged in which users will get one month of free Pro access for every successful referral made by them.

10. Operations plan

Production process

The operation of ScholarRehbar revolves around three different streams of work conducted in parallel and synchronically to ensure that the platform provides quality service to its users throughout the process. Firstly, there is platform development and maintenance, a process that entails the ongoing development, testing, and updating of the web platform and the three major modules thereof. The development work follows an agile approach, with developers continuously releasing updates and new features in the form of regular sprints while maintaining the performance of existing features. Secondly, there is the stream of work dedicated to content research and verification, encompassing ongoing content management, update, and validation of all scholarly information, information about universities, embassies, and deadlines on the website. Since ScholarRehbar relies solely on information being accurate and up-to-date, this particular stream is critical and runs in weekly cycles. Finally, there is the stream dedicated to providing customers' support and success in using the platform; it encompasses all of the communications with Pro and Premium subscribers via email and phone.

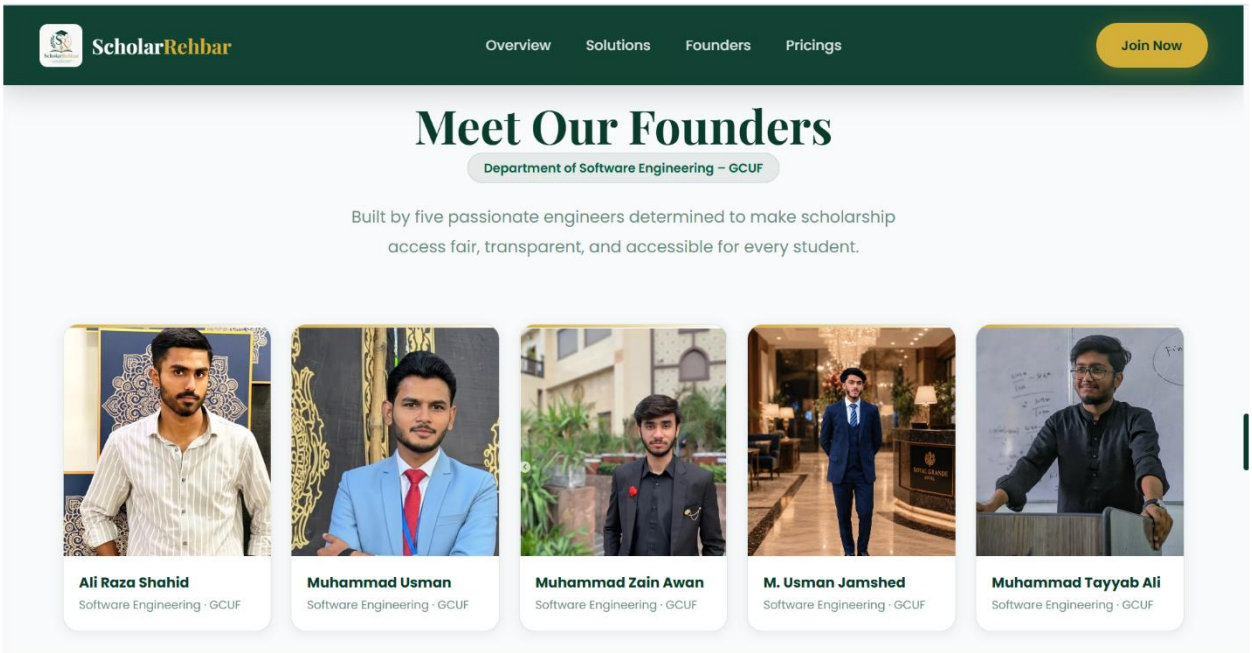

Required Resources

ScholarRehbar will require several key resources that are needed to facilitate its functioning. The most important resources include cloud server infrastructure, which ensures the platform’s efficiency in terms of performance; artificial intelligence (AI) and natural language processing (NLP) application programming interfaces (APIs), which help in the functionality of the SOP Co-Pilot feature and scholarship matching; a database of up-to-date information regarding scholarships and universities; and tools for managing emails and phone calls related to Premium users’ queries.

Staff and Technology

The project ScholarRehbar has been developed by a team of five software engineering students of Government College University, Faisalabad. The

responsibilities have been allocated among them including frontend development, backend development, content verification, support services, and marketing and growth. The current technology used includes HTML5, CSS3, and JavaScript; the future development phase will involve changing HTML to React.js while incorporating Firebase authentication and AI agents. All members of the team perform multiple tasks in the initial stages and it is intended that the number of members of the team will be increased as the number of subscribers increases.

11. Financial Plan

Estimated Startup Cost

ScholarRehbar is an online-based platform that has a relatively lean cost structure compared to any traditional service business. The approximate costs required to start the venture are categorized into three types. The one-time cost for starting the venture includes purchasing the domain name and setting up the website hosting which will be around three thousand rupees per annum, getting SSL certificate and cybersecurity tools at five thousand rupees, and designing assets including branding material at fifteen thousand rupees, making the total amount spent on initial technical setup around twenty-three thousand Pakistani rupees. The operating cost each month will consist of cloud hosting and infrastructure costing five thousand rupees per month, Artificial Intelligence and Natural Language Processing API cost at ten thousand rupees, content research and verification tools at eight thousand rupees per month, online marketing and advertisement at fifteen thousand rupees per month, and communications services to provide customer support to the premium tier customers at three thousand rupees, resulting in the total operating cost of forty-one thousand Pakistani rupees each month. During the early period of the startup, the cost of hiring people will be minimized as the five founding members will provide their expertise services without being paid.

Sales Forecast

The revenue forecasts for ScholarRehbar assume a conservative yet realistic subscriber growth plan that takes into consideration the seasons of academic pursuits and the timing of scholarships in Pakistan. During the peak period of October to February, where many students seek to apply for scholarships, the website aims to acquire one hundred users in the free plan and twenty users who are on the Pro and Premium plans in the first month after launch, making around twenty-five thousand Pakistani rupees per month. During the third month, with the implementation of content marketing and outreach campaigns to universities, ScholarRehbar aims to gain two hundred and fifty users for the

free plan and seventy-five users from the paid plans, earning about eighty-five thousand Pakistani rupees monthly. After the sixth month, with social proof from users' reviews and referral programs already in progress, ScholarRehbar plans to attract five hundred free plan users and one hundred and fifty paid plan users, earning one hundred and seventy thousand Pakistani rupees monthly. Within the first year, the website expects to earn three hundred paid users from the Pro and Premium plans, earning around three million six hundred thousand Pakistani rupees annually.

Profit Estimation

Based on the estimated monthly cost of operation for ScholarRehbar of about forty-one thousand Pakistani Rupees and the projected monthly income of one hundred and seventy thousand Pakistani Rupees by the sixth month, the platform breaks even within three months from its launch. In the sixth month, the platform makes a net profit of about one hundred and twenty-nine thousand Pakistani Rupees per month, which is about seventy-six percent of the gross income, indicating the economic attractiveness of the platform and the profitability of the subscription SaaS business model. The profit margin of ScholarRehbar improves significantly once the subscriber base exceeds three hundred people per year, since the fixed operating expenses stay constant while the revenue increases proportionately.

12. Risk Analysis

Possible Risks and Solutions

There are always certain risks involved in the early stages of development of a platform. According to ScholarRehbar, there are five major risks that may affect the organization's growth and sustainability, and mitigation measures have been discussed.

First and foremost, there is the risk of inaccurate information. The success and value proposition of ScholarRehbar depend entirely on its reliable information and scholarship procedures. Information that is either outdated or wrong can harm the student's application, reduce the credibility of the website, and lead to a swift exit of its users. In order to protect itself from such risks, ScholarRehbar conducts an exclusive process of content verification each week where all scholarships' deadlines, application guidelines, embassy and university processes are compared and instantly updated.

The second risk relates to competition from existing consultancy networks and international platforms like Leverage Edu and Yocket, who have a much larger budget and name. ScholarRehbar addresses this risk by being very localized in terms of Pakistan. It understands everything about the process of getting an attestation from IBCC, HEC, MOFA, and obtaining an APS certificate. In addition, it understands the culture and monetary aspect of the Pakistani students' community very well.

Another threat is low credibility because of the existence of a general trust gap in the overseas studies market of Pakistan owing to the rampant consultancy frauds. The ScholarRehbar solves this problem by being radically transparent by providing all their sources, showing an official link for each bit of data provided, and collecting success stories and testimonials from users since the inception of the platform.

The fourth threat concerns any change in policies and regulations of the two countries involved – namely, Germany and France – that may include drastic changes in visa laws, blocking accounts policies, or APS application rules, all

of which will make the content obsolete immediately. ScholarRehbar combats this problem by being vigilant about the embassy notices, having a plan in place for quick content updates within forty-eight hours after notice.

The fifth risk associated with this research proposal is the risk of payment and subscription problems in Pakistan's digital payments ecosystem where not all students will be able to use digital payment platforms. ScholarRehbar eliminates this risk by using different methods for subscriptions such as JazzCash, Easypaisa, SadaPay, and NayaPay.

13. Future Scope

However, ScholarRehbar's current emphasis on Germany and France is merely an introduction to a much bigger plan. In the short run, the website aims to develop a complete AI Scholarship Assistant that can suggest personalized scholarships for each student, depending upon his or her academic credentials, financial status, and career goals. With the help of an Embassy Verification API integration, ScholarRehbar would be able to update users regarding their visa appointments and processing times in real time. The geographic scope of the website would extend to new popular destinations like the Netherlands, Sweden, and Italy, eventually making ScholarRehbar the ultimate study abroad navigator for Pakistani students, irrespective of the country they wish to pursue their higher education in.

14. Executive Summary

ScholarRehbar is a software-as-a-service scholarship advising and overseas education guidance tool developed by five Software Engineering students from Government College University Faisalabad in response to one of the most pressing issues confronting Pakistani students today. Given that there are around one hundred thousand Pakistani students applying for international scholarships each year, with ninety percent funding their own applications, and a scam-infested consultancy industry where students are frequently exploited financially, ScholarRehbar could not have arrived on the scene at a more

opportune time or in a better way than through its offering of a comprehensive package of verified official scholarship details, a step-by-step application procedure, an AI-driven SOP Co-Pilot, and human assistance – all for just one thousand Pakistani Rupees per month. Our platform has a target market in the millions who we can immediately reach, runs on a capital-efficient SaaS model that breaks even in just three months, and has a future outlook of being the most trusted, most comprehensive, and most influential study abroad platform in Pakistan. The reason why we at ScholarRehbar do not merely lead our fellow countrymen to scholarship opportunities is that we instill faith in them, secure their future, and demonstrate that through the correct knowledge and means, not one Pakistani student should ever have to pay one penny to a conman.
